
PSWG Metering and Meter Reading Subgroup Update October 4, 2000

1. Process # 1 – Initial switch to DA with a meter exchange

There are a few issues within the initial switch that are still not resolved (either standardized with consensus or no consensus). The subgroup hopes to resolve this process soon since many of the outstanding issues are being addressed in Process #2 as well.

2. Process #2 – Switch from DA to Bundled service

The subgroup has been working on documenting and discussing the current processes for each UDC.

Current Issues/Processes

- Issue 35 – Who is responsible for the consumption while the meter is out of the socket?
- Who is responsible for calculating Lost Registration during the exchange and how is it handled?
- What is the UDC process for handling customer owned meters when the customer is returning to Bundled Service?
- What is the timeline for the UDCs to exchange the meters for customers returning to Bundled Service?
- EPA (Equipment Purchase Authorization) – Changing the point in time the signed EPA is exchanged and revising the disclaimer language.

Metering Working Documents

- **Status of Proposed Arizona Best Practice** – Document comparing current UDC business processes as well as identifying agreed upon standards (*Handout at 10-4-00 Policy meeting*)
- **EMI, MDCR & MIRN forms** – Forms used to communicate meter information between the UDC, ESP, MSP and MRSP
- **Meter Data Element Document** – Identifies the data elements required on the EMI, MDCR & MIRN forms for process #1&2.
- **Master Issues List**
